30-Minute Student Task

Build Your Own Rule-Based Python Chatbot

Student Name	D. Martina Angelin
Register Number	99230041121
Programming Language	Python

Assessment

A simple rule-based conversational chatbot was developed in Python. The chatbot accepts user input continuously, recognizes greetings and different questions, responds accordingly, and exits when the user types bye or exit.

Demonstration Evidence

The following pages contain screenshots of the Python implementation and the terminal execution.

Python Chatbot Implementation

Screenshot of the Python program implementation.

lesson5 > mypractice.py > ...

```python
name = input("Enter your name: ")

print("Hello", name, "!")
print("I am a simple chatbot. Type 'bye' or 'exit' to stop.")

while True:
    message = input("You: ").lower().strip()

    if "hello" in message or "hi" in message:
        print("Bot: Hello", name, "! How are you?")

    elif "how are you" in message:
        print("Bot: I am doing great! Thanks for asking.")

    elif "what is python" in message:
        print("Bot: Python is a popular programming language.")

    elif "what can you do" in message:
        print("Bot: I can answer simple questions and chat with you.")

    elif "bye" in message or "exit" in message:
        print("Bot: Goodbye", name, "!")
        break

    else:
        print("Bot: Sorry, I don't understand that. Try asking something else.")
```

Chatbot Execution and Test Output

Terminal output showing greeting, question handling, an unknown message, and the exit command.

```
Enter your name: Martina
Hello Martina !
I am a simple chatbot. Type 'bye' or 'exit' to stop.
You: hello
Bot: Hello Martina ! How are you?
You: how are you
Bot: I am doing great! Thanks for asking.
You: what is python
Bot: Python is a popular programming language.
You: difference between python and java
Bot: Sorry, I don't understand that. Try asking something else.
You: bye
Bot: Goodbye Martina !
